

I am upset to discover that the FCC is considering interfering in and/or regulating the services I receive from XM Satellite Radio. I subscribe to XM Radio precisely because it is unregulated and therefore carries programming which I want. I am not interested in censored, sanitized or otherwise government prescribed programming and would urge the FCC to stay out of satellite radio and satellite TV.

I am firmly opposed to HR 4026 and will fight any legislation passed or being circulated which tries to stifle the ability of satellite providers to offer me content I want without the interference of government.
